

Staying safe

Stay safe at home, out and about
and when you're online

Information written with you in mind.

This information guide has been produced with the help of older people, carers and expert peer reviewers.

Published: **October 2021**

We'd love to hear from you.

1) Join our Readers' Panel. Have your say and be involved in updating our guides by joining our Readers' Panel. You don't need any specialist knowledge at all.

Join our Readers' Panel at **www.ageuk.org.uk/readers-panel**.

2) Tell us your story. We want to include real voices of real people in our guides. We'd love to hear about your experiences.

Email us at **stories@ageuk.org.uk**.

What this guide is about

We all want to be safe, especially when we're in our own homes or going about our day-to-day lives. Unfortunately, as we get older, we can feel a little less safe, because of mobility issues, illness or feeling more vulnerable to crime and scammers.

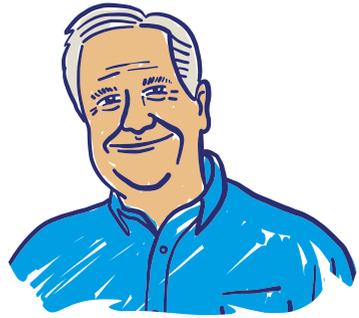

However, there are plenty of things you can do to feel safer and put your mind at ease. We cover all the bases in this guide, outlining ways to help you feel safer around your home, when you're out and about and when you're online.

This symbol indicates where information differs for Wales and Northern Ireland. As far as possible, the information in this guide is applicable across the UK.

“A friend of mine recommended someone who came round to help me secure my windows and doors.”

Lee, 69

There's lots of information in this guide so we've also put a handy list of security tips on page 54 called 'Top tips for staying safe' which covers some of the most important things to think about when considering your safety.

Good to know

Some of the suggestions in this guide, especially those around the home, might mean you need a helping hand – and knowing where to turn and who to trust can be tricky. To find a reliable tradesperson, you can use the Government-run TrustMark scheme (page 64) which lists local tradespeople who comply with Government-endorsed standards. You could also see if your local Age UK runs a 'Trusted Trader' or handyman scheme that can recommend someone. In Wales, contact Age Cymru or Care & Repair Cymru (page 59). It's also worth checking if your local Home Improvement Agency (HIA) offers services for free, such as fitting locks, etc.

Staying safe at home

They say there's no place like home. It's where we should feel safest, but that's not always the case. There are many reasons why you may start to feel a little uneasy at home, but there are things you can do to feel more confident and safe around the house.

Preventing falls

As we get older, we may start to feel a bit less steady on our feet and worry about falling. Maybe you've had a fall or two in the past and you're worried about having another. Fortunately, there are lots of simple things that can help you avoid a fall.

Look out for trip hazards

- Clear away clutter. We're all guilty of it, but leaving items lying around the home or on the stairs can cause a trip.
- Coil up cords and wires or tape them close to the wall to keep them out of the way.
- Arrange your furniture to make it easier to move around your home. If you need a hand with this, is there someone you could ask?
- Replace worn out or fraying carpets and loose rugs. You can use double-sided carpet tape to help prevent them slipping, although you may just want to remove loose rugs completely.

Wear the right shoes

A good pair of shoes can make such a difference. Worn out or badly fitting shoes and slippers can increase the likelihood of a fall. It's important to look after your feet as problems such as foot pain can affect your balance and increase the risk of a fall.

Get help with small repairs

Some local Age UKs (page 56) offer a handyman scheme for older people who meet certain criteria, to assist with small repairs and help identify hazards at home. There may also be a Home Improvement Agency (HIA) in your area offering similar help. You can contact Foundations (page 59), the national body for HIAs, or your local council.

In Wales, contact your local Age Cymru (page 56) to find out if there's a handyman scheme in your area, or contact Care & Repair Cymru (page 59). In Northern Ireland check with Age NI (page 56) for local availability of handyman schemes.

Avoid slipping in the bathroom

You may want to think about getting a handrail, non-slip bathmat or a bath seat. These can help you feel more confident getting in and out of the bath. You can get a non-slip rubber mat or use self-stick strips to make sure it doesn't slide about.

If you're finding it difficult to use the bathroom safely, for example, when getting in and out of the bath and shower, contact your local council for a care needs assessment. The assessor will help you work out what equipment or adaptations might be right for you. Any equipment or small adaptations that help meet your assessed needs are free.

Think about lighting

Make sure stairs are well lit – you can have two-way light switches fitted, so switches at the top and bottom of the stairs control the same light. You could also think about nightlights or having a lamp or torch by the bed in case you need to get up in the night. And it may seem obvious, but are your bulbs as bright as they could be? Bulbs are now measured in lumens rather than watts (1,500 lumens are the same as about 100 watts).

To see if there's a home improvement agency in the area that can improve your lighting contact Foundations or Care & Repair Cymru in Wales (page 59).

Next steps

Contact the Royal National Institute of Blind People (RNIB) for further advice on lighting in the home (page 63). Also contact Living Made Easy for information about equipment and adaptations that could help you at home (page 60).

Check the stairs

The stairs tend to become harder to navigate the older we get. Make sure there's no clutter on the stairs, they're well lit and have suitable handrails and bannisters. You can also get non-slip tape to mark the edges of any steps – inside or out of the home. But make sure it's stuck down properly so it doesn't become a hazard in itself.

Keep an eye on pets

We all love our pets, but they can get in the way sometimes. You'll know best how they behave, but it's always a good idea to be aware of where they are – especially at feeding time when they tend to move that bit quicker!

Consider using a personal alarm

If you don't feel entirely confident at home, a personal alarm could help. If you fall, a personal alarm lets you contact a 24-hour response centre at the touch of a button – some alarms include GPS tracking for extra peace of mind. Many councils run personal alarm schemes. You can go online to www.gov.uk/apply-for-community-alarm or contact your local council to find out what's available in your area.

Next steps

For more information about preventing falls, see our information guide **Staying steady**. If you need help with small home adaptations, contact your local Home Improvement Agency or your local Age UK (page 56) to see if there's a handyman scheme in your area. In Wales, contact your local Age Cymru. Our guide **Adapting your home** and factsheet **Home improvements and repairs** have more information.

Fire prevention

Fires can start quickly and be devastating. But there are some simple things you can do in your home to prevent them and give yourself some peace of mind.

Get a smoke alarm and check that it works

It's vital to have at least one smoke alarm on every floor of your home. Alarms should bear the British Standard number BS 5446 and the Kitemark. Test them monthly and keep them free from dust. Use a step ladder or get someone to help you when fitting, testing or cleaning your alarms.

You should change the battery at least once a year. Alternatively, you can get a long-life alarm that lasts between 7 and 10 years.

There are specialist smoke alarms if you have hearing or sight difficulties.

Private landlords in England must fit smoke alarms on every floor where there's proper living space. If you live in private rented accommodation, check with your landlord to make sure this has been done.

In Wales, private landlords who self-manage their properties, or letting agents who have been appointed on their behalf, must have a licence from the Rent Smart Wales scheme and follow a Rent Smart Wales Code of Practice. This recommends that landlords should fit at least one smoke alarm on each floor of the property.

Plan a fire escape route

Think about how you'd escape if there was a fire, especially if you live in a flat. You can ask the management company for a copy of your building's fire risk assessment to read.

Arrange a Home Fire Risk Check

Some fire and rescue services offer a Home Fire Risk Check where they can visit to help you install smoke alarms, plan escape routes and assess other hazards. Contact your local fire service to find out more.

Good to know

The Royal National Institute for Deaf People has products for people who are deaf and hard of hearing, including smoke alarms (page 63).

In the kitchen

When you're cooking, make sure pan handles don't jut out. It's easy to knock them, especially if you're not too steady on your feet. You could also use a timer to help remind you that there's something cooking.

If a pan catches fire, don't move it and never throw water on it. The best thing to do is turn the heat off if you can, shut the door, leave the property and call **999**.

Cigarettes and candles

Make sure any cigarettes, candles, and incense or oil burners are completely out when you've finished with them.

Use a fire guard and sweep the chimney

If you have an open fire, use a fire guard and make sure you have your chimney and flues swept (ideally at least once a year) to prevent fire and carbon monoxide build-up. You can find an approved chimney sweep through the Heating Equipment Testing and Approval Scheme (page 60).

If you have a fire

Don't panic and don't try and tackle a fire yourself. Remember the fire service advice: **Get out, stay out and call 999**.

Next steps

Talk to your local fire and rescue service for more advice on fire safety or to see if they can give your home a Fire Risk Check. Visit the UK Fire Service website to find your local fire and rescue service (page 64). In Northern Ireland, Age NI can make a referral for you for a free Home Fire Safety Check.

Gas and solid fuel safety

Gas and solid fuel problems can go unnoticed, but some straightforward checks will make your home safer and reduce the risk of an accident.

Organise a yearly gas appliance check

It's good to have an annual check to make sure your appliances are working safely. Make sure the check and any repairs are done by a Gas Safe registered engineer (page 59). Never try to repair or service a gas appliance yourself, or let a friend or relative try – even if they say they know what they're doing!

If you own your home and receive a means-tested benefit, such as Pension Credit, you may be entitled to a free annual gas safety check from your energy supplier. You should ask them about this and any other priority services you might be eligible for (see page 17 for more information). If you're not eligible for a free check then shop around, as costs can vary.

If you rent, your landlord is legally required to arrange a safety check with a registered Gas Safe engineer at least once a year for any gas appliances they've provided. The landlord must then give you a copy of the inspection record within 28 days of the check and fix any problems reported by the engineer.

Service any solid fuel appliances

Solid-fuel appliances – for example, heaters or cookers that burn wood or coal – also need a regular service. Contact HETAS for a directory of registered installers and servicers that you can search online (page 60).

Check the pilot light on your boiler

If you have a gas boiler with a pilot light, check regularly to make sure it's burning. If it's gone out, there should be instructions on the boiler on how to relight it. If you can't do it yourself, call out a heating engineer who's Gas Safe registered.

Allow air flow and ventilation

Is there enough ventilation for gas or solid fuel appliances to burn? Keep air vents and chimneys clear and unblocked.

Good to know

If you smell gas or suspect a gas leak, open all doors and windows, turn off the gas supply and call the 24-hour National Gas Emergency Service on **0800 111 999**. Do not use a phone near the gas leak, as this could cause a spark that might ignite the gas. Use a mobile phone outside your property, or a neighbour's phone. Don't turn any electrical switches or appliances on or off.

Contact the Gas Safe Register (page 59) for more information on gas safety or to find a registered engineer.

Be aware of carbon monoxide

Carbon monoxide is unnervingly known as a ‘silent killer’ because you can’t see, taste or smell it. Even low exposure to carbon monoxide can cause long-term health problems, while high exposure can cause poisoning.

Heaters, boilers or other appliances that burn gas, coal, oil or wood can give off carbon monoxide if they aren’t working properly. Look out for yellow or brown staining, a lazy yellow or orange-coloured gas flame rather than a sharp blue flame, or too much moisture in the room.

Symptoms of carbon-monoxide poisoning include having a headache, feeling sick, or having a sore throat and a dry cough – similar to a cold or flu. If you’re worried that you might have carbon-monoxide poisoning call **999** straight away.

You can install a simple carbon monoxide detector to help prevent poisoning – make sure it bears the Kitemark and European Standard number BS EN 50291.

If you live in private rented accommodation in England, your landlord must fit an alarm in each room containing a gas or solid fuel appliance. In Wales, a landlord must fit a carbon monoxide alarm if a new solid fuel-burning appliance is installed. The Rent Smart Wales Code of Practice for landlords recommends that carbon monoxide alarms should be provided in all rooms where a gas, oil or solid fuel appliance is present.

Electrical safety

Most homes have lots of things plugged in. Making sure everything's being used safely can prevent a fire.

Check the condition of your electrics

Keep an eye out for any fraying or exposed wires and any damaged appliances and sockets as they could be a fire hazard. Don't ignore warning signs such as burning smells, buzzing or crackling sounds, or fuses blowing.

Don't overload sockets

Be careful not to overload sockets as this could start a fire. If you don't have enough sockets, you can use a bar adapter on a lead rather than a block adapter. But make sure you only put one plug directly in each socket for appliances that use a lot of power, such as a fridge or washing machine.

Keep appliances out of the bathroom

Appliances such as hairdryers, heaters (unless fitted with a cord pull) and mains-powered radios shouldn't be used in the bathroom.

Electric blankets

Be careful when using electric blankets as they can be a hazard. Check whether yours can definitely be left on overnight and look for any danger signs, such as fraying fabric or scorch marks. Never switch it on if you, or it, are wet and don't use it with a hot water bottle – however cold it is!

Get your electric blanket tested by an expert at least every 3 years and replace it every 10 years. The shop where you bought the blanket or your local Trading Standards Office may be able to test it. Find your local Trading Standards Office using the Chartered Trading Institute website (page 57). Your local Age UK (page 56) or local Home Improvement Agency may also have a handyperson scheme that can help. In Wales, contact your local Age Cymru.

Be careful with portable heaters

Avoid leaving heaters unattended and don't use them while you're sleeping. Keep them away from paper, furniture, clothing and curtains.

If you have a power cut

Call **105** free of charge. You'll be put through to your local electricity network operator who can give you help and advice. In Northern Ireland, contact Northern Ireland Electricity on **03457 643 643**.

Sign up for priority services

Energy suppliers and distribution network operators have Priority Services Registers for people over State Pension age and those who need some extra help, perhaps because they live with a long-term health condition or disability. Some people need support temporarily after an injury or illness, too. If you sign up for priority services you may get extra support if there's a power cut.

Your distribution network operator is the company in charge of the electricity supply to your area. You can contact the Energy Networks Association (page 58) to find out who your network operator is.

To make sure you get as many of these services as possible, join both your supplier's register and your distribution network operator's register, as they may offer different things.

Next steps

Contact Electrical Safety First (page 58) for more information on electrical safety or to find a registered electrician. Visit their website to download **Electrical safety in the home: A guide for older people and their relatives**.

Securing your doors and windows

Some simple, and often inexpensive, precautions can really reduce the risk of your home being burgled and help you feel safe at home.

Fitting your doors and windows with good locks can really deter burglars – and even if they did try to break in, they would be much less likely to succeed. If you live in rented accommodation, you can ask your landlord if they can help make your doors and windows more secure.

Doors

These are some security precautions to take with doors:

- Make sure you have a lock that can only be unlocked with a key, even from the inside. Typically, this is a five-lever mortice deadlock with Kitemark BS 3621. You should get one of these on any back doors too.
- An automatic rim latch lock (sometimes called a night latch) can also be fitted to add an extra level of protection – these can be opened from the inside without a key.
- To make the doors more secure, you can add locks such as hinge bolts.
- Many people also have a door chain fitted so they can see who's at the door without completely opening it. But it's a good idea not to leave the chain on all the time if there's a chance that carers, family members or emergency services may need to get in.
- Patio doors and French doors can sometimes be less secure than front doors, depending on their age and what they're made from, so get advice from a locksmith about how best to secure them.
- Install a peephole if you'd like to see who's on the doorstep before you open up.
- Are your door frames and hinges sturdy? This can really add to the overall strength of the door.
- Don't leave keys under doormats or in plant pots by the front door – burglars know where to look.
- Consider fitting a letter-box cage which can stop thieves tampering with locks through the letter box.
- If you have glass in your door, consider replacing it with laminated glass or fit a film on the inside of the glass.

Windows

These are some security precautions to take:

- Fit window locks with keys to all downstairs windows and any others that might be easier for burglars to reach, such as those above a flat roof or near a drainpipe.
- Keep window keys in a safe place, out of sight and reach – but somewhere easy to get to in case of an emergency.
- If you have new windows fitted, make sure they come with good locks as it can be tricky to add better ones later.
- Many burglaries are carried out by opportunists who see an open or unsecured window or door – so make sure you keep things locked when you pop out.
- If you have a carer, ask them to make sure they lock any windows and doors they've unlocked as they leave.
- If you're out for the evening, leave a front or upstairs room light on and maybe leave the radio on so burglars think there's someone in.

Next steps

If you need locks fitted or changed, use a qualified locksmith. You can check whether a locksmith is a member of the Master Locksmiths Association (MLA) by using their website or calling them (page 61).

For more advice and tips on keeping your home secure, contact your local Safer Neighbourhood Team (page 63) or check to see whether your regional police force has security tips on its website. In Northern Ireland, contact the Police Service of Northern Ireland (page 62).

Safety at the door

Unexpected knocks at the door can be unsettling, especially if it ends up being someone you don't know.

Adding a peephole or chain to your door can help you stay in control. It's a good idea to make sure windows and back doors are locked when answering unexpected knocks at the door.

Bogus callers

Bogus callers try and trick their way into your home by pretending to be someone they aren't. They may pretend to be a meter reader, police officer, council or benefits official, or a person needing help. They may try to distract you or trick you into believing that they urgently need to come into your home. Any genuine person will have ID they won't mind showing you.

Password schemes

Gas, electricity and water companies are all required to keep registers of customers who need extra support, such as older and disabled people. These are known as Priority Services Registers. If you join a register, you'll be offered special services such as a unique password you can use to verify the identity of a caller claiming to be from the company. This will give you peace of mind, knowing that they are genuine. A genuine caller should also show you an identification card.

Ask the caller to come back another time

You can always ask someone to come back another time if you feel uneasy, or arrange a more convenient time for them to visit. A genuine caller won't have a problem with you taking these precautions. Be particularly careful if there's more than one person at the door. If you're worried about a doorstep caller, call the police, your housing officer, the manager of your sheltered housing scheme or someone you trust. Not sure? Don't open the door.

Rogue traders

Doorstep traders aren't always genuine or honest salespeople and can be quite pushy. Rogue traders may try to push you into agreeing to unnecessary home repairs or improvements, often at inflated prices.

It can be difficult to get rid of some doorstep traders unless you agree to sign up for whatever they're selling. But it's your doorstep and you're in control. Don't agree to anything, sign a contract or pay money until you've talked to someone else and never let anyone persuade you to go to your bank and withdraw cash. Above all, don't be afraid to ask a salesperson to leave. If they refuse, call the police.

Some areas operate a 'no cold-calling zone' where signs and stickers are put up around the area to show cold callers they aren't welcome. To find out about setting one up in your area, contact your local Trading Standards Service which you can find through the Chartered Trading Standards Institute website (page 57).

In Northern Ireland, the Police Service (page 62) has a Quick Check scheme with a freephone number to check whether a doorstep caller is authentic and to get support.

Next steps

See our guide **Avoiding scams** for more information about the different types of common scams, including doorstep scams. If you think you've been a victim of a scam, contact Action Fraud (page 57) for information and advice.

Contact numbers

Write down the phone numbers of your local services in the space below so that they're handy if you need to check the identity of a doorstep caller. Find their details on a utility bill or online.

Electricity:

Gas:

Water:

Local council:

Local police station: **101** (if it's not urgent)

If you're suspicious, dial **999** and ask for the police.

Contact your utility companies and ask to join their Priority Services Register. Tell them what support you need, including a doorstep password scheme if you think this would be helpful – they should provide services that suit you.

“I've put a sticker in the porch window to stop people knocking at the door trying to sell me things.”

Liza, 70

Boosting security around your home

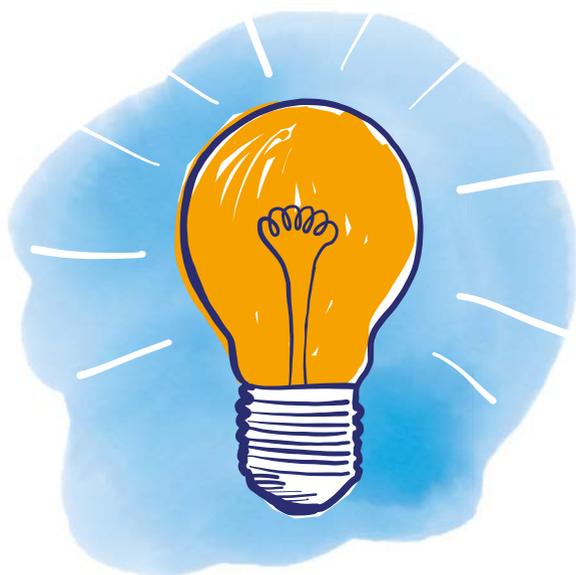

As well as securing doors and windows, there are other measures you can take around your property to feel safer at home.

Burglar alarm

A burglar alarm can warn you, and/or the police, if someone breaks in. There are lots of alarm types with different features, and costs vary.

There are things you should consider if you're thinking about installing a burglar alarm:

- Ask the Safer Neighbourhood Team (page 63) or the Crime Prevention Officer at your nearest police station for advice before you buy an alarm. Safer Neighbourhood teams work with local people to make the area safer.
- Get at least three quotes and specialist advice from alarm companies before you have one installed.
- Ask your insurance company if it recommends any alarm companies and how an alarm needs to be maintained. Some companies offer a discount on your home contents insurance if you have an approved alarm installed.
- Get professional help to install the alarm and check they are approved by the National Security Inspectorate (NSI) (page 61) or the Security Systems and Alarms Inspection Board (SSAIB) (page 64).

Lights

Outdoor lights make it easier for you to get to the front door and find your keys when it's dark. They also act as a deterrent to any would-be burglar. If you get a motion-activated light, make sure you position it with your neighbours in mind.

Next steps

Visit the Secured by Design website (page 63) for more information on home security and licensed security products.

Garages, sheds and passageways

Make sure you also secure any garages, sheds and passageways outside your home.

- Garages and sheds can be full of expensive tools, some of which a burglar could then use to break into your home. Fit garage doors with good locks and replace any that aren't solidly built.
- Fit a strong, lockable gate to any passageways at the side and back of your home. If you share a passageway with a neighbour, discuss it with them first.
- Metal bar side and driveway gates are helpful as they allow intruders to be seen.
- Put up a strong fence or plant a prickly hedge to deter thieves from getting into your garden.
- Fix trellis or anti-climb tops to any fences, gates or walls to make it harder for burglars to climb over.
- Consider having gravel driveways and paths, which can make it harder for burglars to approach silently.

Contact Foundations (page 59) to find out if there is a Home Improvement Agency in your area that could help with costs or organising the work. If you're disabled, you might be eligible for a Disabled Facilities Grant, which is provided by local councils to help fund changes to your home – give the council a call to find out.

In Wales, contact Care & Repair Cymru (page 59).
In Northern Ireland, you may be able to apply for a Disabled Facilities Grant by contacting the Occupational Therapy Department at your local Health and Social Care Trust.

Neighbourhood Watch

Neighbourhood Watch schemes are voluntary groups of local people who work in partnership with the police, local councils and other agencies that help keep the community safe.

They can offer valuable neighbourly help and advice and give you peace of mind. Members of the Neighbourhood Watch might:

- watch out for neighbours who are older or vulnerable
- keep an eye on neighbours' homes when they're away
- receive local police updates and information
- share crime-prevention advice in the community.

“It’s nice knowing the community are looking out for each other.”

Tina, 68

Next steps

See the **Neighbourhood Watch’s Members’ Guide** for more tips and advice about preventing crime and keeping safe. Ask your local Safer Neighbourhood Team (page 63) or look on the Neighbourhood Watch (page 62) website to see if there’s a scheme in your area. If there isn’t, why not help to set one up? In Northern Ireland, contact your local neighbourhood police by calling **101**.

Insurance

Having good insurance cover helps put your mind at ease. If the worst happens and anything is stolen or damaged, you won't need to fork out to replace it.

If you already have home insurance, make sure it completely covers your needs. If you're looking for a new policy, compare quotes from different companies to make sure you're getting the best deal possible. You can compare quotes online. If you're not online, is there a friend or relative who could help you check? They may even find they could save money themselves.

Lots of insurance companies offer lower premiums to people with good home security – for example, if you have a burglar alarm or locks on your windows. You may also get a discount if you're a member of a Neighbourhood Watch scheme (page 62).

Next steps

MoneyHelper (page 61) provides information and advice about getting the best insurance deal. Some companies tailor their products for older people.

Marking possessions

If your things are stolen, the police are more likely to find and return them if you've marked them with your postcode and the number of your house or flat, or the first two letters of its name.

There are different ways to mark possessions. You can use a permanent marker or a more subtle security pen that can only be read under ultraviolet (UV) light. This works well for things such as electronics, but speak to an expert before marking any items that are particularly valuable such as antiques or specialist items.

Take pictures of valuable items and write down the serial numbers of any electrical equipment. If items are stolen, this information can help police return any recovered items to you.

You can also register valuable possessions online for free on the Immobilise Property Register (page 60). This website helps police identify owners of lost or stolen property.

Next steps

Ask your local Neighbourhood Watch group (page 62) or Safer Neighbourhood Team (page 63) for more information on marking possessions.

Staying safe when you're out and about

As we get older, we sometimes feel more vulnerable when we're out and about. This can affect our confidence and stop us doing things we enjoy. But there are ways you can stay safe.

When you're out and about

Going out can feel daunting, whether that's because you worry about your valuables or about getting around, or because everything just feels a bit much sometimes.

The tips on the following pages should help you feel more confident when you leave your home.

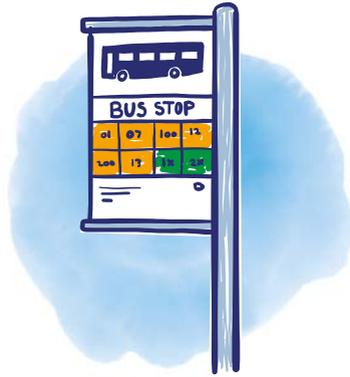

In the street

- Keep valuables, such as your mobile phone, out of sight.
- Don't carry around large sums of money. If your pension is paid straight into your account, you don't have to withdraw it all in one go.
- Before you use a cash machine, check that no one is hovering behind you. Some people are more comfortable using a cash machine that's inside a bank. Always safeguard your Personal Identification Number (PIN).
- Keep your handbag in sight at all times.
- If someone tries to snatch your bag, it may be best to let them take it rather than trying to keep hold of it.
- If you use a wheelchair, you could keep your belongings beside you rather than hanging them on the back of the chair.
- Consider planning your route before you leave home and stick to busy, well-lit areas.
- If you think you're being followed, keep moving and head for a busy area or go into the nearest shop. Tell someone what's happening or call the police.
- If there's an emergency, shout loudly to get someone's attention. You could also think about carrying a personal attack alarm.

“I always go into the bank to get money out. I don't like doing it on the street.”

Mick, 74

On public transport

- If someone makes you feel uncomfortable, move away.
- Try to wait for public transport in busy, well-lit areas.
- You may feel safer if you sit near other people. If you're on the bus or train and there aren't many people about, sit near the driver. Try to be near the bell or emergency alarm.

In taxis

- Keep the number of a reliable, licensed taxi company handy. Find a company you trust and feel comfortable with.
- Book a taxi before you go out. When it arrives, check it's the one you ordered before you get in. If you're in any doubt, ask the driver to tell you the name of the person who booked it.
- Sit behind the driver on the back seat and if you feel uneasy, ask to be dropped off somewhere you know that's busy and well lit.

“I always use the same taxi firm. They know me now and usually send the same driver to take me to the doctor’s.”

Helen, 83

When you're driving

- Before setting off, plan your route and make sure that you have enough petrol. You could tell someone where you're going and how long you expect the journey to take.
- Think about what you would do if you broke down. For example, do you carry a mobile phone you could use in an emergency? Keep any contact numbers you might need to hand. If it's cold, it's a good idea to have a blanket and some warm clothes in case you have to wait for help to come.
- Try to park in busy, well-lit areas. If you'll be parked for some time, think about what the area will be like after dark.
- When you're driving, keep valuables and personal possessions out of sight. When you leave the car, make sure you remove any valuables and lock the doors.
- Consider joining a roadside assistance scheme for extra peace of mind should you break down. Prices vary, so shop around to find the best deal. Call different companies for quotes, check their prices online or try looking at price comparison websites.

Mobile phones

If you have a mobile phone, it's worth taking steps to prevent it from being stolen and to protect yourself if it is.

- Add a passcode or PIN. This can be done in your phone security settings and means if someone does get hold of your phone it makes it more difficult for them to get into it. Some phones feature extra security features, such as fingerprint scanners or facial recognition.
- It's a good idea to make sure your phone is charged when you go out and about or drive somewhere, in case there's a problem.
- Avoid using your phone in crowded places or when walking down the street and try not to leave it in your back pocket or an unzipped section of your bag.
- If your phone is stolen, get in touch with your network as soon as possible so they can block it. Then report it to the police too.
- Ask your mobile phone provider for your international mobile equipment (IMEI) number or find it by typing in ***#06#** on your mobile phone keypad – your IMEI number will appear on your screen. It's worth taking a note of it, along with your mobile phone number, so if your phone is stolen you can pass these details on to your network and the police.
- Register your phone for free on the Immobilise Property Register (page 60).

Going on holiday

To a burglar, milk bottles on the doorstep or a newspaper sticking out of the letter box are invitations to break in. Here are some tips to help you enjoy your holiday without worrying.

- Is there someone you trust to could keep an eye on things while you're away? Perhaps they could also collect your post, draw your curtains, water your plants and switch lights on and off.
- Cancel milk, newspapers and other regular deliveries.
- Don't completely close curtains or blinds as they can be a giveaway during the day.
- Plug a lamp into a timed switch so it turns on in the evenings while you're away. However, try not to leave it in a room that passers-by can see into when the light is on.
- Don't display your home address on the outside of your luggage and don't leave your luggage on view in the car or at home.
- If you have a garden and you're going to be away a while, it might be worth mowing the lawn before you go.
- Check your building and home contents insurance is up to date and current while you're away.
- If you know you're going to be away for some time and there isn't someone who can pick up your post, consider registering with the Royal Mail Keepsafe service (page 63). Your letters and parcels are safely stored at your local delivery office for up to two months and are then delivered to you when you're back.
- Try not to mention the specifics of your holiday on social networking sites before you go. You don't want everyone knowing when your house will be empty.

Staying safe online

The internet can make our lives easier, and these days it seems you can do anything online. However, it can be overwhelming at times, and you may be worried about keeping your details safe while you're browsing online.

If you'd like to get online but don't know where to start, contact your local Age UK (page 56) or Online Centres Network (page 62) to see what help is available locally. In Wales, contact your local Age Cymru (page 56).

Good to know

You might come across some new terms in this section. If you're not sure what they mean, see our glossary on pages 50-52.

How to recognise dodgy emails

These tips will help you know what to look out for:

- Does the email have errors in its spelling or grammar, or is it written in an unusual style?
- Check the email address, not just the sender. It may seem to come from your bank or phone operator but have a personal email address, rather than one with the bank's name.
- Even if an email address looks official, perhaps from the bank or HM Revenue and Customs, it may not be genuine. If you have a funny feeling it's not, then contact the organisation and check. Don't use the contact details in the email.
- Does it use your proper name, or does it start with a general greeting like 'Dear customer'?
- Is there a sense of urgency, threatening that unless you act now a deal will expire or your account will be closed?
- Be aware that you can be taken to a fake website even if a link appears to be correct. It's best to avoid links and search the website for yourself so you know it's OK.
- Is the sender requesting personal information, such as your username, password or bank details?
- Does the email ask for money for someone in need, or claim you've won a cash prize?
- Is there something to open with a message or text saying 'Check this out' or 'See what I found' without explanation?

To confuse things more, these emails may even come from an email address that you recognise, such as a friend or family member. This can happen when someone's account is hacked. If you receive an email that seems suspicious or out of character, give the person a ring to see if they sent it.

Spam

Spam, or junk mail, is usually from a person or organisation trying to sell a product or service – often something you have no interest in and haven't signed up to receive information about.

These are some common types of spam:

- advertisements from a company
- emails telling you about a scheme to make you rich
- emails warning you of a virus
- emails encouraging you to send the email onto more people.

Most email providers have spam filters that block emails from untrustworthy sources automatically, but it's still good to know what to look out for.

“Some of these dodgy emails seem so real. My friend lost a lot of money. It's better to be safe than sorry.”

Therese, 86

If you receive a suspicious email

Take these actions if you receive a suspicious email:

- It's always better to be safe than sorry when you receive a suspicious email, so if you're not sure where it's from or feel uneasy about an email, just delete it without opening it.
- If an email contains a link or attachment, don't click on it unless you're certain it's safe.
- Don't reply to spam or suspicious emails, even just to say 'no', as this shows the sender your email address is active and they'll probably be in touch again.
- Your bank (or any other financial institution) will never ask for personal information or your PIN over email. If you receive an email claiming to be from the bank, contact your bank directly by phoning them or typing their web address into your browser. Don't follow the link in the email.
- If an email asks about account information, phone the organisation directly to ask about the email, using the phone number found on their official website.
- Don't panic if there's a sense of urgency in the email – this is exactly what the sender wants you to do. Take time to properly check the email first.
- Forward the email to the Suspicious Email Reporting Service at **report@phishing.gov.uk**.

Next steps

Visit the 'Protecting Yourself' section on the Get Safe Online website for more information on email scams (page 59).

Online shopping and banking

Being able to do the shopping and keep an eye on your money from the comfort and safety of your home can be really handy. More and more of us are doing it, and it's particularly helpful if you find it difficult to get out and about.

However, as with anything when you're transferring money over the internet, it comes with certain risks. But using a secure website when entering card information ensures your information can't be read by anyone else.

What's a secure website?

The website address should begin with **https://**. The 's' stands for 'secure'.

If the address bar – the bit that contains the web address that runs across the top of your browser – is green, this is an extra sign that you're using a safe website.

You should also look out for a padlock symbol in the browser next to the web address – but don't be fooled by a padlock on the actual webpage. Websites that offer secure payments and other financial transactions, such as banking, need a security certificate. To view it, you can click on the padlock symbol in the address bar to check the organisation is what it says it is. The certificate should be up to date and registered to the right address. However, the padlock isn't an absolute guarantee of safety, so be cautious if you still have any doubts.

Tips for shopping and banking online safely

- If a deal looks too good to be true, it probably is. Be cautious of anything offered in an email you didn't ask for.
- Use a strong password (see page 44 for more information).
- You'll never be asked for your card PIN (Person Identification Number), but you'll probably be asked for the security number for your debit or credit card, referred to as 'CVV' (card verification value), 'CVC' (card verification code) or 'CVV2'. This is the three digits on the back of your card (if you have an American Express card, the CVV is 4 digits and is on the front of your card).
- If you get a pop-up message warning you about a website's security certificate, it's likely a scam. If you click on it, you'll likely be redirected to a fake website, designed to let somebody else read the information you're sending.
- Stick with online retailers that have a good reputation, either as high street shops or established online stores. Plenty of online retailers have reviews from previous customers you can read before buying anything.
- Check where the seller is located. Just because the web address has 'uk' in it, it doesn't mean they're based in the UK. If you buy from a seller or company based outside the UK, it can be more difficult to enforce your rights and harder to sort out any problems. By law the seller must provide their full contact details.
- Watch out for added or hidden costs, such as VAT or additional postage, especially for transactions outside the UK. To find more information on buying from sellers based in other countries visit the UK International Consumer Centre website (page 64).

- Use a credit card for internet transactions to add extra protection. You can also check to see if your debit card provider offers any protection. If your purchase costs more than £100 and you use a credit card, the seller and your card company are equally responsible if anything goes wrong. Be aware that there is sometimes a card handling fee when you pay with your credit card, though, so check how much this is.
- Check if your bank offers free anti-virus software or browser security products.
- Always make sure you log out from any accounts so no one who uses the computer after you can access any of your information.

Next steps

See our guide **Avoiding scams** for more information on how to protect yourself.

Learn My Way (page 60) offers free online courses on digital skills, including getting started with online shopping, online payment methods and consumer rights.

Social networking

Social networking websites are online communities where you can create a profile describing yourself, exchange public and private messages and join groups that interest you.

You can keep in touch with family and friends, share photos, play games, find out about events and much more. Facebook (www.facebook.com) and Twitter (www.twitter.com) are among the most popular.

These guidelines can help you stay safe:

- Think about who you want to see your profile. By default, your profile is likely to be public, meaning anyone can see it, but you can usually change your settings to make it private.
- It's best to avoid posting personal information such as phone numbers, your home address or date of birth as this is usually how scammers get in touch with you.
- If possible, pick a username that doesn't include any personal information. For example, don't use 'annajones1947'.
- Use a strong password that is different from the passwords you use for other accounts (see page 44).
- Be cautious if people you've just met online ask you to reveal personal information or want to meet you very quickly. Never send money to anyone you haven't met.
- Be on your guard against phishing scams (see page 51).

Next steps

Visit the Get Safe Online website (page 59) for more information about using social networking sites securely.

Passwords

Setting up strong passwords is probably the simplest, most effective thing you can do to stay safe when you're on the internet.

Avoid weak passwords

Weak passwords are made up of common words, numbers or keyboard patterns. These are some examples of commonly used weak passwords:

- password
- 123456
- qwerty
- password1

Choose a strong password

A good way to come up with a strong password that's easy for you to remember is by putting together three random words, such as 'SkyChairYellow'.

Make sure you don't use our example or include any personal information. You can also include symbols or a number.

You can save your passwords to your internet browser to make it easier to log in to and manage your accounts. There's more about this on the next page.

Choose different passwords

Use different passwords for different websites or accounts. It can be tricky to remember lots of different ones, but having one password for all accounts isn't a great idea because if a stranger gets access to ('hacks') your account on one site, they'll be able to log in to all your accounts. Your email account is the gateway to all your other accounts so always make sure that the password for it is different.

Be careful writing down your passwords

Never write down your password. If you need a written reminder, try to write a hint that won't make sense to anyone else, rather than the actual password, and keep it safe, away from your computer.

Password managers

Some internet browsers have built-in password managers. These are tools that remember your passwords for different sites and fill them in for you automatically when you need them.

When you log in to a website for the first time, the password manager will ask if you want it to remember the password. You have the choice if you want it to or not. It can save time to use this function, but you should only use it on your own computer.

Your password manager login details will be available to anyone you share the computer with, so make sure it's only shared with people you trust – and don't use the password manager anywhere in a public place, like a library.

Next steps

The National Cyber Security Centre (page 61) website has more information about strong passwords and staying safe online.

Protect your computer

Everyone worries about getting a virus on their computer. But there are ways to protect your computer from harmful types of malware and viruses.

Install anti-virus software

Viruses are malicious programs that can spread from one computer to another by email or through websites. They can display unwanted pop-up messages, slow your computer down and even delete files.

Anti-virus software helps to find, stop and remove these malicious viruses. The type of software you'll need depends on whether you have a Windows or Apple computer.

Install anti-spyware software

Spyware is an unwanted program that runs on your computer. It allows unwanted adverts to pop up, tracks your online activities and can even scan your computer for private data such as credit card numbers. It can make your computer slow and unreliable and make you a target for online criminals. By installing anti-spyware software, you can reduce the chances of this happening.

“I couldn't get my head round all of this. But I went on a local course and now I can use my computer to do all sorts.”

Dev, 74

Keep your operating system updated

The operating system is the main software program on your computer, and manages all the other programs on it – the most common systems are Microsoft Windows and Apple’s Mac OS. Whichever operating system you have, keep it updated to give yourself the best protection. You should receive notifications when new updates are available but you can also update your software manually.

Protect your wireless network

If you use wireless internet at home, you will have a wireless router. You need to protect your wireless network (also known as Wi-Fi) so that people living nearby can’t access it. Read the instructions that come with your router to find out how to set up a ‘key’ – a type of password – so that no one else can access the internet through your router.

Good to know

It may seem as if you need a lot of software to protect yourself from online risks, but it’s actually very easy. You can buy a complete package that includes everything you need, or get effective free software such as AVG (www.free.avg.com) or Avast (www.avast.com). These work on both Windows computers and Apple computers.

Online threats change constantly so once your software is installed, keep it up to date to ensure you have the highest level of protection.

Computer scams

Beware of a common scam that involves scammers calling you claiming to be from a well-known IT firm, then asking you to follow a few simple instructions to get rid of a virus, update your software or fix another issue with your computer. If you do as they ask, they will upload software called spyware onto your computer, which allows them to access any personal details you have stored there.

Legitimate IT companies never contact customers in this way, so never respond to a phone call from someone claiming that your computer has a virus. If you get a call like this, hang up straight away.

Report a computer scam

You can report a computer scam to Action Fraud (page 57).

See our guide **Avoiding scams** for more information on different types of scams and how to avoid them.

“Dad’s memory isn’t the best and I’m really worried about him getting scammed online.”

Bethan, 44

Next steps

You can find step-by-step explanations and advice on protecting your computer on the Get Safe Online website (page 59).

Protect your tablet and your mobile phone

You can check emails, shop and bank online or explore the internet on tablets (such as iPads) and smartphones – so they need protecting too. Start by password-protecting any devices.

You can download anti-virus and anti-spyware protection for tablets and phones. These are often referred to as apps (applications), which is just another term for software. The best protection for your device depends on the type of phone or tablet you have, but you could ask a member of staff in a phone or electronics shop or have a look online for more information. A lot of good anti-virus protection for phones and tablets is free.

Some highly rated anti-virus apps, which are free, are:

- Avast mobile security (www.avast.com)
- Kaspersky internet security (www.kaspersky.co.uk)
- Norton mobile security (uk.norton.com)

These apps work on phones and tablets that use Windows, Android and Apple products and it's a good idea to keep them updated.

Next steps

Visit Get Safe Online (page 59) to find more information on protecting your smartphone or tablet. See our guide **Avoiding scams** for information on telephone scams, including text messages.

Glossary

Anti-spyware

Helps protect your computer against pop-ups, slow performance, and security threats caused by spyware and other unwanted software.

Anti-virus software

Software that detects and prevents known viruses from attacking your computer.

App (application)

A type of program that you can download for your computer, tablet or mobile phone. There are hundreds of apps available, some for free. They do lots of different things, from playing games and puzzles, to helping you remember to take your medication, or allowing you to access your bank account.

Attachment

A file such as a photo, document or program, sent along with an email.

Browser

The computer software or app you use to access the internet, for example Internet Explorer, Google Chrome and Safari.

Hack

An attempt to gain unauthorised access to a computer or account.

Malware

Malware is short for 'malicious software'. A general term used to refer to hostile or intrusive software.

Operating system

The software that manages different programs on a computer.

Phishing

An attempt at identity theft in which criminals direct users to a counterfeit website to trick them into disclosing private information, such as usernames or passwords.

Pop-up

A small window that suddenly appears (or 'pops up') on a webpage, usually an advertisement or alert. Some are genuine, others aren't.

Profile

A description that may include your personal details and is used to identify you on a social networking website. They can be set as public (viewed by everyone) or private (only viewed by certain people).

Router

A device that connects your computer to a broadband-enabled telephone line and emits your home internet signal.

Smartphone

A mobile phone which, as well as making calls and sending texts, can connect to the internet, send emails, and perform a number of other functions like a computer.

Social networking website

An online community where users connect with friends, family and other people who share their interests.

Spam

A commercial email that you did not request, also known as junk mail.

Spyware

An unwanted program that runs on your computer, which can make it slow and unreliable or even make you a target for online criminals.

Tablet

A larger handheld device with a touchscreen which can connect to the internet and be used as a portable computer – for example, an iPad.

Virus

A program that spreads from one computer to another by email or through malicious websites. Viruses can slow your computer down, display unwanted pop-up messages and even delete files.

Wireless network

Also known as Wi-Fi, this is a way for your computer to connect to the internet without using wires or cables.

What to do if you're a victim of crime

- Call the police (**999**) as soon as you can. You can call **101** to report a crime if you don't need an emergency response.
- If you think you've been a victim of a fraud or a scam, contact Action Fraud (page 57).
- If you think you've been burgled when you get home, don't go inside unless you're sure the intruder has gone. Call the police straight away.
- If you're burgled, make a list of missing items and contact your insurance company. They are likely to ask for the crime reference number, which you should get from the police.
- If you lose a set of keys, get your locks changed.
- Cancel any stolen bank cards as soon as possible – the phone number should be on your bank statement or on any cash machine belonging to your bank.

Good to know

The Criminal Injuries Compensation Authority (CICA) (page 58) compensates victims of crime who have been injured or traumatised – it doesn't replace stolen items.

Victim Support (page 64) can provide information about compensation schemes and explain your options. It also gives free practical and emotional support to people who have experienced crime and runs a witness service to help people who are going to court.

Top tips for staying safe

There's a lot of information in this guide which will help you stay safe. Here are some of the main tips:

- Keep an eye out for clutter and trip hazards around the house to help reduce the chance of having a fall.
- Get your smoke alarms and boiler or gas appliances checked to make sure they're all working safely.
- Keep all windows and doors locked and bolted (where possible) while you're out or overnight.
- If you have one, set your burglar alarm every time you go out. If you don't have one, consider whether you should get one fitted.
- When you lock up at night, keep the keys to hand (but out of sight) so that you can get out easily if you need to.

- If someone rings or knocks at the door and you're not sure who is there, or feel uneasy, don't feel pressured to open it. Never let a stranger into your home unless you're confident you know what they want and are who they say they are.
- Cancel milk and regular deliveries before going away.
- Leave some lights on when you go out at night or set a timer switch, if you have one.
- Speak to your local Safer Neighbourhood team or Neighbourhood Watch group about any worries.
- Be careful of your valuables and your surroundings when you're out.
- Set strong passwords for any online accounts.
- Look out for the signs that an email might not be genuine and always be careful opening any links or attachments (it's usually best not to).
- Install anti-virus and anti-spyware software on your computer and electronic devices.
- Don't give out personal details when using the internet.

“No one should feel unsafe in their own home. Small changes can make a big difference.”

Gillian, 84

Useful organisations

Age UK

We provide advice and information for people in later life through our Age UK Advice line, publications and website.

Age UK Advice: 0800 169 65 65

Lines are open seven days a week from 8am to 7pm.

www.ageuk.org.uk

In Wales, contact Age Cymru Advice: **0300 303 44 98**

www.agecymru.org.uk

In Northern Ireland, contact Age NI: **0808 808 7575**

www.ageni.org

In Scotland, contact Age Scotland: **0800 124 4222**

www.agescotland.org.uk

Action Fraud

National reporting centre for fraud and internet crime in England, Wales and Northern Ireland. Call the helpline for advice on preventing fraud and what to do if you fall victim to it, or use the online fraud reporting service.

Tel: **0300 123 2040**

Textphone: **0300 123 2050**

www.actionfraud.police.uk

Chartered Trading Standards Institute

National consumer helpline for help and advice, or to make a complaint. Online search directory to find an approved trader.

Tel: **0808 223 1133**

www.tradingstandards.uk/consumers

Citizens Advice

National network of advice centres offering free, confidential and independent advice, face-to-face or by telephone. Website offers online information and you can use it to search the details of your nearest Citizens Advice.

In England, call **Adviceline: 0800 144 8848**

www.citizensadvice.org.uk

In Wales, call **Advicelink: 0800 702 2020**

www.citizensadvice.org.uk/wales

Citizens Advice Consumer Service

Provides information and advice on consumer issues by telephone and online. Offers tips on recognising email scams.

Tel: **0800 223 1133**

(**0808 223 1144** for a Welsh-speaking adviser)

www.citizensadvice.org.uk/consumer

In Northern Ireland, contact **Consumerline**

Tel: **0300 123 6262**

www.nidirect.gov.uk/consumerline

Compensation Services

Supports the victims of violent crime in Northern Ireland by providing compensation.

Tel: **0300 200 7887**

www.nidirect.gov.uk/contacts/compensation-services

Criminal Injuries Compensation Authority (CICA)

Can compensate people who have been physically or mentally injured by a violent crime in England, Scotland or Wales.

Tel: **0300 003 3601**

www.gov.uk/government/organisations/criminal-injuries-compensation-authority

Digital Unite

Helps older people learn about computers and the internet. It has a network of tutors across the UK who offer one-to-one tuition for a fee. There are also useful step-by-step instructions for using the internet and computer on its website.

Tel: **0800 228 9272**

www.digitalunite.com

Electrical Safety First

Provides free guides and advice on electrical safety in the home and garden.

Tel: **020 3463 5100**

www.electricalsafetyfirst.org.uk

Energy Networks Association

Contact them to find out who your network operator is.

Tel: **020 7706 5100**

www.energynetworks.org

Foundations

National body for Home Improvement Agencies (HIAs), with a website you can use to find your nearest one in England. HIAs provide support for vulnerable homeowners and tenants to help them undertake adaptations, repairs and improvements to their home.

Tel: **0300 124 0315**

wwwFOUNDATIONS.uk.com

In Wales, contact **Care & Repair Cymru**

Tel: **0300 111 3333**

www.careandrepair.org.uk

Gas Safe Register

Provides help and advice on gas safety and maintains the register of individuals and businesses who meet the strict health and safety standards required to install or repair gas appliances. You can check if an engineer is on the register by visiting the website or by calling the free consumer helpline. All registered engineers carry an official photo ID card which displays their engineer's licence number and qualifications.

Tel: **0800 408 5500**

† The Age UK network includes the charity, its trading companies and national partners (Cymru, Scotland and NI). We also work closely with local Age UKs. Age UK is a charitable company limited by guarantee and registered in England (registered charity number 1128267 and registered company number 6825798). The registered address is Tavis House, 1–6 Tavistock Square, London WC1H 9NA.

Help us be there for someone else

We hope you found this guide helpful. When times are tough, it's so important to get some support. Did you know you could help us reach someone else who needs a little help? Here's how:

1

Give your views on guides like this

Our Readers' Panel helps make sure the information we produce is right for older people and their families. We'd love you to join. Go to www.ageuk.org.uk/readers-panel.

2

Donate to us

Every donation we receive helps us be there for someone when they need us. To make a donation, call us on **0800 169 8787** or go to www.ageuk.org.uk/donate.

3

Volunteer with us

Our volunteers make an incredible difference to people's lives. Get involved by contacting your local Age UK or at www.ageuk.org.uk/volunteer.

4

Campaign with us

We campaign to make life better for older people, and rely on the help of our strong network of campaigners. Add your voice to our latest campaigns at www.ageuk.org.uk/campaigns.

5

Remember us in your will

A gift to Age UK in your will is a very special way of helping older people get expert support in the years to come. Find out more by calling **020 3033 1421** or visit www.ageuk.org.uk/legacy.

What should I do now?

You may want to read some of our relevant information guides and factsheets, such as:

- **Avoiding scams**
- **Adapting your home**

You can order any of our guides or factsheets by giving our Advice Line a ring for free on **0800 169 65 65** (8am-7pm, 365 days a year).

Our friendly advisers are there to help answer any questions.

All of our publications are available in large print and audio formats.

There's plenty of really useful information on our website, too. Visit www.ageuk.org.uk/homesafety to get started.

If contact details for your local Age UK are not in the below box, call Age UK Advice free on **0800 169 65 65**.
